About Me

I'm a CSE graduate from BRAC University skilled in Full Stack Web Development, Machine Learning, AI, and Software Quality Assurance. Proficient in Python, JavaScript, React, Laravel, PyTorch, TensorFlow, and Postman, with hands-on experience in API testing, QA documentation, and building scalable web applications.

Skills

Web Development: HTML5, CSS3, JavaScript, ReactJS, Angular, Vue, TypeScript, PHP, Laravel, Flask, REST API, Node.js, Express.js

Programming Languages: Python, JavaScript

Databases: MySQL, MongoDB

Machine Learning & AI: TensorFlow, PyTorch, ML/DL, Artificial Intelligence, Simulation & Modeling

Tools & Platforms: Git/GitHub, Agile, SDLC, STLC, Vite, Office 365, Windows, Linux, Postman, Selenium, JIRA

Other Skills: Problem Solving, Critical Thinking, Project Management, Troubleshooting

Projects

Taxi Bhai-Taxi management system | [GitHub](#)

- Built a role-based taxi management platform where Admins approve requests, Owners register vehicles, Drivers manage rides, and Passengers book and pay connected end-to-end via REST API.
- Tech stack: React, Firebase Auth, Node.js, Express, MongoDB Atlas.

Online Security System | [GitHub](#)

- Built a full-stack e-commerce platform for security products with user authentication, cart management, bKash payment integration, and an admin panel for product and order management.
- Tech stack: PHP, MySQL, Bootstrap 3, jQuery, Apache.

AuroraWeather | [GitHub](#)

- Developed a real-time weather app with city search, geolocation, hourly and 7-day forecasts, and animated visuals showing temperature, humidity, wind, UV index, and sunrise/sunset tracking.
- Tech stack: HTML, CSS, JavaScript, OpenWeatherMap API, Vite.

Dynamic Weather in Countryside | [GitHub](#)

- Built a 2D countryside simulation in Python using OpenGL featuring day/night toggling, animated rain, a sailing boat with river reflection, and blooming flowers by implementing mid-point line and circle drawing algorithms from scratch.
- Tech stack: Python, PyOpenGL, GLUT.

Cryptocurrency Price Prediction using GBM | [GitHub](#)

- Implemented Geometric Brownian Motion with Monte Carlo simulations to forecast cryptocurrency prices, estimating drift and volatility from historical data and visualizing predicted price paths with confidence intervals.
- Skills: Python, NumPy, pandas, Matplotlib, seaborn, yfinance.

Attn-PatchGAN (Thesis Project) | [Github](#)

- Built an attention-enhanced PatchGAN model for image synthesis, combining adversarial, perceptual/content, and SSIM losses with a DenseNet-121 feature extractor, encoder-decoder backbone, and unsupervised clustering for latent space analysis.
- Skills: Python, PyTorch, TensorFlow, OpenCV, NumPy, pandas, Matplotlib, Scikit-learn, Jupyter Notebook.

Heart Disease Prediction | [GitHub](#)

- Built a binary classification model using the UCI Heart Disease dataset to predict the presence of heart disease from 14 clinical features including age, cholesterol, and blood pressure, covering EDA, preprocessing, model training, and evaluation
- Skills: Python, pandas, NumPy, Matplotlib, Seaborn, Scikit-learn.

Education

Brac University

Bachelor's Degree in Computer Science and Engineering

CGPA - 3.39
07/2020 - 11/2025

Comilla Victoria Govt. College

Higher Secondary Certificate

GPA - 4.67
09/2017 - 07/2019

Comilla Zilla School

Secondary School Certificate

GPA - 5.00
01/2013 - 02/2017

Experience

B-Trac Solutions Ltd.
SQA Engineer

104, Banani Road No. 11, Dhaka
02/2026 - 05/2026

- Built a Postman API testing setup with JWT automation, Newman CLI, and CI/CD integration for the Carcopolo mobile app
- Created QA documentation including an API test report and 76 test cases across six app modules
